

MACS Energy & Water is an international consulting company active in the field of sustainable infrastructure development and finance. In our focus we have the changing realities in the energy and water supply sectors and challenges which these changes bring along. Our business model is based on the holistic thinking, which is needed to get sustainable energy and water projects off the ground. Our regional experience primarily covers Central and Southeast Europe, Latin America, Central Asia, Middle East, North & Sub-Saharan Africa, as well as the EU countries. We currently have the following job opening:

Junior Engineer for Energy Efficiency and Renewable Energy

(Belgrade office)

As a junior associate you will be challenged to develop firsthand knowledge of our client's business models, building up client-management, problem-solving and communication skills. You will contribute significant segments to our services as well as develop responsibility for supporting the broader problem-solving effort. The findings and contributions to team discussions will help to deliver impact for our clients.

The position covers the following working areas:

- Support in carrying out energy audits for EE projects and technical Due Diligence for RE projects
- Energy research and analysis of energy systems
- Support to project management, including communication with clients, project monitoring, progress reporting

Requirements:

- Engineering University degree (BSc/MSc electrical, mechanical or technology) with preferable knowledge of energy efficiency technologies and the use of renewable energy
- Excellent language, drafting, communication and presentation skills in English, knowledge of other languages (German, French, Spanish) are assets
- Communicative and flexible for short-term traveling

What we can offer:

- Flexible working environment
- Contribution to international projects
- Possibility for further development and education in the ambit of sustainable technologies
